PROJECTS

1 WEATHER TRACKING WEBSITE

I am creating a weather tracking and reporting website using HTML, CSS, JavaScript, and Python with Django. The website provides real-time weather updates by fetching data from APIs, showing parameters like temperature, humidity, and wind speed. Users can report local weather conditions, which helps in creating a community-driven weather platform. The frontend is designed with a user-friendly interface, ensuring smooth navigation, while the Django backend manages data, user input, and interactions. Additionally, I have included a portfolio section on the site, where I showcase my web development projects and highlight my skills in both frontend and backend development i hope helping my resume

2. CRISTIANO RONALDO ACHIEVEMENTS

A Cristiano Ronaldo achievements website built with HTML, CSS, and JavaScript showcases his career milestones, awards, and stats in a visually appealing way. HTML organizes the content, while CSS ensures a modern, responsive design across devices. JavaScript adds interactivity, allowing for dynamic features like career timelines and real-time updates. This project highlights your ability to handle dynamic content, create interactive elements, and design responsive layouts, making it an impressive addition to your portfolio that demonstrates your frontend development skills. Additionally, by integrating real-time data, the website keeps fans updated on Ronaldo's latest achievements, showing your capacity to work with live data. This project is a perfect example of how to combine sports content, interactive features,
